AutoCAD is used worldwide for architectural and engineering, surveying, building design, mechanical design, infrastructure design, drafting, drafting, sheet metal fabrication, and so on. AutoCAD is used by governments, construction and infrastructure companies, architects and engineers, surveyors, small and medium businesses, government agencies, and many others. AutoCAD is also used by some high-end printers, and is widely used in the printing industry. Contents What is AutoCAD? AutoCAD is an American company, based in San Rafael, California, that was founded in 1982. It is a prolific software product and offers versions for personal computers, mobile devices, and the cloud. AutoCAD is the most commonly used CAD software in the world. With approximately 4 million copies sold, AutoCAD has become the world's most widely used desktop CAD application, and is used in every engineering, design and construction company worldwide. The roots of AutoCAD go back to 1981, when the software was developed by a team of 30 people, and was only intended to be used on a single desktop computer. The first version was called MicroCAD, as its first user interface was on an 8x9 dot-matrix printer. In 1982, it was sold to Claris as a desktop app for DOS, running on an internal 3MHz Motorola 68000 microprocessor. In 1984, MicroCAD was renamed AutoCAD and shipped as a single-user, serial-based application for Macintosh and IBM PC-compatible computers. AutoCAD's first success was the release of AutoCAD LT in 1984, which was adopted by the construction industry to give contractors a single-user desktop CAD application. Although more expensive than the original AutoCAD, AutoCAD LT was adopted widely and has been the standard CAD software for the construction industry ever since. In 1987, two new products were introduced: AutoCAD/Map 3D for the Windows environment, and AutoCAD Web for the web. Both these products were hit with the same problem that many other CAD products had: they were viewed as being solely a CAD product. AutoCAD Web was the first CAD software to have an actual web interface, which was very well received. Since then, with each new version of AutoCAD, the software continues to evolve with an emphasis on ease of use, functionality, and platform flexibility. According to the company's own marketing materials, AutoCAD is

The company claims that it provides the best technology and support for AEC /Construction applications. On top of that, it offers a business platform that allows users to get their AEC / Construction product on the market in a cost-effective way. It offers a "faster, more predictable, and more robust" development environment for design, documentation, and simulation. The company also makes it easier for developers to find existing building information modeling (BIM) assets, which will help them create a better workflow and gain flexibility for customers to create new products. The company released the Managed Design Services business unit in December 2015. The new unit is centered on providing BIM product support and training and consulting services for customers. ABI Research named AutoCAD a "Leading Software Company" for 2018. In 2019, CAD Manager was included as the 3rd-highest growing CAD software category in the report. I'm running some test cases in Cucumber that I'd like to localize. When I run "rake cucumber:translate" I get: Could not determine which bundle is missing translations, so for all. I'd like to see the actual message in the output log file, but I don't see an easy way of doing this. It seems the only way I have of outputting translations is to use puts, and it's hard to add puts to the output log file. This is Cucumber 2.1.3 and Rake 1.3.2. Is there a way to add puts to the output log file or override cucumber.yml to specify the actual message? A: Add the following to your Rakefile puts Rake::Task["cucumber:translate"].output This will put the message on the output instead of displaying it. Revisit your design and make adjustments before printing. While you're working on a drawing, you can preview it in a new way: split views that show just the markup or the sketch. (video: 4:03 min.) Markup functionality available in AutoCAD is seamlessly incorporated into working in AutoCAD. To start using markup commands, select Tools > Edit > Text and click the Apply button to bring up the new Markup Assistant, which guides you through the available markup tools. Find and edit information more easily. Quickly search for text in drawings. Select any found text and type a replacement with the Type tool. You can also edit the text you see. (video: 1:40 min.) User-Friendly Modes for Design and Construction Activities: Work without interruptions. While you're doing design work, you can zoom out to see the entire drawing. (video: 1:38 min.) Work seamlessly with other drawing tools. Press Shift while working with tools to complete commands. The Shift key causes you to be aware of other drawings in your project. (video: 1:30 min.) Work with multiple files at once. Save a copy of your work while you continue working with the file you were working on earlier. (video: 1:22 min.) Achieve greater design control with multi-point editing. You can hold down the Shift key while moving the cursor to make quick changes. (video: 1:14 min.) AutoCAD features an improved command palette with lots of keyboard shortcuts, many that you didn't know about. You can use them to achieve the same results as with mouse commands. Arrow Bar: The new arrow bar provides a graphical point-and-click solution for the most common drawing commands. Select a command from the command bar and click to complete the command, as you would with the mouse. To select a drawing object that's part of an arrow bar, click the arrow icon and move the pointer to the desired position. To select an object that isn't part of an arrow bar, simply click on the desired object. Jump-To: Speed up your navigation in a drawing and minimize the number of drawings you have to open. With Jump-To, you can navigate directly to any command on the drawing canvas without opening a separate drawing. Just select a command or
